TO VOLUME 17

MARCH 1936-FEBRUARY 1937

CHRONOLOGICAL LIST OF ARTICLES

Page

MARCH 1936:
- The Minnesota Financial Survey: Digest of a Survey of the Finances of Minnesota in 1932, With Special Reference to Highways, Conducted by the Bureau of Public Roads and the University of Wisconsin ... 1

APRIL 1936:
- The New Hampshire Financial Survey: Digest of a Survey of the Finances of New Hampshire in 1932, With Special Reference to Highways, Conducted by the Bureau of Public Roads and the University of Wisconsin ... 21
- Dimensions of Testing Equipment Affect Hubbard-Field Stability Values ... 38

MAY 1936:
- Stabilized Soil Roads ... 45

JUNE 1936:
- Circular Track Tests on Low-Cost Bituminous Mixtures ... 69
- Indexes of Highway Construction Costs ... 83

JULY 1936:
- A Study of Road Tars ... 89
- Preserve Bench Marks for Future Use ... 110

AUGUST 1936:
- Digest of Report on Arkansas Traffic Survey ... 113
- The Cone Method for Determining Absorption by Sand ... 128
- Motor-Fuel Consumption, 1935 ... 135
- State Motor-Fuel Tax Receipts, 1935 ... 136
- State Motor-Vehicle Registrations, 1935 ... 137
- State Motor-Vehicle Receipts, 1935 ... 138

SEPTEMBER 1936:
- The Structural Design of Concrete Pavements, Part 4: A Study of the Structural Action of Several Types of Transverse and Longitudinal Joint Designs ... 143

Page

OCTOBER 1936:
- The Structural Design of Concrete Pavements, Part 4: A Study of the Structural Action of Several Types of Transverse and Longitudinal Joint Designs—Concluded ... 175
- Disposition of State Motor-Carrier Tax Receipts, 1934 ... 193
- Disposition of State Motor-Fuel Tax Receipts, 1934 ... 194
- Disposition of State Motor-Vehicle Receipts, 1934 ... 196
- Disposition of Receipts From State Imposts on Highway Users, 1934 ... 198

NOVEMBER 1936:
- The New York Financial Survey: Digest of a Survey of the Finances of New York in 1932, With Special Reference to Highways ... 203

DECEMBER 1936:
- Determination of Coefficients of Friction of Sliding Bearings for Bridges ... 223
- Disposition of State Motor-Fuel Tax Receipts, 1935 ... 238
- Disposition of State Motor-Vehicle Receipts, 1935 ... 240
- Disposition of State Motor-Carrier Tax Receipts, 1935 ... 242
- Disposition of Receipts From State Imposts on Highway Users, 1935 ... 244

JANUARY 1937:
- Experimental Bituminous Treatment of Sandy-Soil Roads: Report on Experiments in South Carolina ... 249

FEBRUARY 1937:
- Weed Control and Eradication on Roadsides: A Study of Present Practices and Their Practical Application ... 281

INDEX TO PUBLIC ROADS, VOLUME 17

A

Page

Absorption of water from base courses of oil-processed paving mixtures, relation to bitumen content of mixtures 80–82
Absorption tests of various sands 128–134
Acid soils:
  characteristics 46, 52–55, 64
  neutralizers of, types used in soil stabilization 47, 54, 63, 64
Acids in road tars, limitation of in specifications 89
Adhesives (insoluble), use in stabilization of soils 57, 64
  see also Binders, binding materials.
Administration costs, *see* Motor-fuel taxes, collection . . .—Motor-vehicle imposts. . ., collection . . .—Overhead, . . .—Registration fees. . ., collection . . .
Administration, highway:
  Minnesota 1, 4, 8, 13
  New Hampshire 21, 24, 25
  New York 203, 204, 206, 216
Admixtures:
  bituminous admixtures—
    circular track test data for oil-processed surfaces 69–82
    petroleum admixtures in road tars, test for detection of 93
    use in soil stabilization 45, 47, 52, 54, 57–65, 249–278
  chemical admixtures, use in soil stabilization 45, 47, 52, 54–58, 60, 61, 64
  granular materials, use in soil stabilization 45, 50, 51, 58, 60, 64
Adobe soil, stabilization method 62
Adsorbed water in fine aggregates:
  effects of 130
  quantities that may be adsorbed 130
  removal of 130
Adsorptive powers of soils in relation to soil stabilization 45–48, 50, 52–57, 64, 65
Aggregate content of low-cost bituminous paving mixtures; relation to mixture voids, aggregate voids, and bitumen volumes 74–76
Aggregate interlock in joints in concrete pavements as means of controlling stresses ..... 169 (fn), 175, 180, 189, 192
Aggregates:
  angularity as affecting results of cone tests of sand 133
  bituminous aggregates—
    types and gradings used in—
      road mixes tested on circular track 69
      stability test specimens of road tars 106
    water contained in at time of applying bitumen, effects upon oil-processed paving mixtures 78, 81, 82
  data for admixtures and cover materials used in stabilization of soil roads 45–65, 249–278
  fine aggregates—
    absorption tests 128–134
    "saturated" and "surface-dry" conditions 128–134
  see also headings beginning Aggregate—*also* Cost trend index of highway construction—Voids, aggregate voids.
Agricultural products, transportation on highways (Arkansas data) 120–123, 125
Alkalinity of soil, alkaline soils 52–54, 64
Ammonia:
  limitation of, in specifications for road tars 89
  use in soil stabilization 57
Ammonia compounds as weed killers 289–291
Anthracene, limitation of, in specifications for road tars 89
Apparatus, testing, *see* names of tests and names of materials tested.
Arkansas traffic survey, digest of report 113–127
Arsenicals as weed killers 289, 290, 292, 300
Asphalt, asphaltic products, *see* names of asphaltic products—*also* Bituminous materials.
Asphalt pavements:
  surface whitening of sheet asphalt 54
  see also Surfacing (road), types of.
Assessments, special:
  Minnesota (1932) 2, 3, 8, 11
  New Hampshire (none) 24, 26
  New York (1932) 203, 207, 208
Atterberg soil tests (liquid limit) 46
Axle loads of motor trucks, traffic survey data (Arkansas) 120–126

B

Page

Barium, adsorbed ions of, as affecting swelling of clays 53
Barium chlorate as weed killer 294
Base courses:
  of road mixes tested on circular track—
    bonded top of limestone base 77, 81
    dry vs. wet base courses 69, 77–82
    types used for various mixes. 69, 70, 73, 74, 77–81
  of stabilized soil roads .. 45, 51, 56–59, 64, 65, 249–278
Base exchange in soils 45, 46, 52–54, 64, 65
Base materials of liquid asphalts and road tars:
  consistency as indicated by method of pouring the residues 96, 97
  specifications for coal-tar cutbacks 89, 90
  types used in various tars 89–91, 97
Bates road tests in Illinois, r 145
Bearings, sliding, for bridges:
  friction tests, exposure tests 223–237
  materials and finishes used in friction test specimens 223, 224
Bellefontaine (Ohio) concrete pavement, r 143
Bench marks, preservation for future use, a 110
Bending stresses (load stresses, warping stresses) in concrete pavements as affected by joint design 148–154, 157, 160–171, 175–192
Bentonite 53, 54
Benzene-insoluble free carbon, formation in road tars, determination of 105
Bibliography:
  soil stabilization 64, 65
  weed control 299, 300
Binders, binding materials:
  addition of chemicals to, in soil stabilization 45, 47, 52, 54–58, 60, 61
  amount required in well-graded soil mixtures 60
  bituminous binders, *see* Bituminous materials.
  rock powders, effect on stone mixtures 55, 64
  tests important in selection of soils to be used as binders 55, 56
  various binders used in stabilization of soil roads 45–65, 249–278
Bitumen content:
  of bituminous materials—
    specification requirements for road tar products 89
    test data for—
      materials used in stabilization of experimental soil road 254, 255, 257
      tars, road 92
  of bituminous mixtures used in stabilization of soil road—
    requirements (surface area method and Nebraska formula) 274
    test data and relation of bitumen content to stability 257, 260–262, 264–269, 271–275, 278
  of mortars of oil-processed road mixtures, relation to stability of mortars and of entire mixture 76, 77
  of mud ejected through surface cracks in experimental bituminous paving mixtures 80, 81
  of oil-processed paving mixtures—
    data for mixtures tested on circular track 70
    permissible bitumen content, relation to viscosity of materials 74, 76–78, 82
    relation to—
      absorption of water and damage caused by excessive moisture 78–82
      compaction to refusal by traffic 71
      mixture voids, aggregate voids, and aggregate volumes 74–76
      stability of surfaces 69–82
Bitumen losses and effects of, data for:
  materials and mixtures used in stabilized soil road 254, 271–273, 278
  tar products 91–93, 95–109
Bituminous admixtures, use in soil stabilization 45, 47, 52, 54, 57–65, 249–278
Bituminous macadam roads, tars for use in 89–109
Bituminous materials:
  cold-application materials, hot-application materials—
    binding ability immediately after application, comparative data ..93, 106–109
    use in stabilization of experimental soil road 249–278
  consistency—
    as affecting oil-processed mixtures 69–77, 82
    specification requirements for tar products 89, 90, 93, 95

Bituminous materials—Continued.
  consistency—continued. Page
    test data for various materials 69, 70, 90–109, 250, 278
    test procedures for tars and liquid asphaltic materials 91, 93–97, 109
    see also Viscosity (ies).
  cost data 264–269
  quantities as affecting road-mix bituminous surfaces 69–82
  specifications 69, 82, 89–93, 95, 97
  types and quantities used in investigation of effect of dimensions of testing equipment upon stability values in Hubbard-Field tests of paving mixtures 39
  types, quantities, and application methods used in—
    oil-processed mixtures tested on circular track 69–77
    roadside weed control 290, 297–299
    stabilization of soil roads 58, 62–64, 249–262, 264–269, 271–278
  use—
    as coating of bonded bars in doweled joints in concrete pavements 191
    as joint fillers in concrete pavements 143, 144, 156
  see also Base materials—Emulsions, use—Liquid asphaltic materials—Tars.
Bituminous mats as bases and as wearing courses of experimental soil road ..249–278
Bituminous paving mixtures:
  circular track tests of low-cost mixtures 69–82
  coarse-aggregate mixtures, Hubbard-Field tests of 38
  dry mixtures, wet mixtures (oil-processed), on wet bases 69–82
  fine aggregate mixtures, stability values as affected by dimensions of testing equipment in Hubbard-Field tests 38–40
  premixed material, use in maintenance of bituminous treated experimental soil road 265, 269
Bituminous roads:
  stabilized soil roads 45, 47, 52, 54, 57, 58, 62–65, 249–278
  see also Surfacing (road), types of.
Bituminous treatment, bituminous surface treatment of roads:
  double surface treatment of experimental soil road 256, 260, 276
  methods, data for several roads 62–64, 249–278
  retreatment of soil road 250–255, 258–261, 264–269, 272–278
  South Carolina experiments on soil roads .. 62, 249–278
  tars for use in, study of 89–109
Blade-mix method of bituminous retreatment of stabilized soil road 275
Blading operations:
  in roadside weed control 281, 282, 287, 288, 298
  in stabilization of soil roads 58–62, 250, 256, 265–269, 275, 276
Blower for drying sand sample in absorption tests, description 130, 131
"Blow-ups" in concrete pavements 145
Boiling points:
  of constituents of road tars 91–93, 95, 96, 109
  of free water and of adsorbed films of water in soils 46
Bond:
  between concrete slabs and dowels—
    bonded dowels and unbonded dowels, action 146, 150–152, 155–171, 175–185, 188–192
    prevention methods 149, 150, 191
  in base courses of low-cost bituminous mixtures, cement-bonded top, use in experimental mixture 77, 81
  in oil-processed paving mixtures, circular track test data 69–82
  see also Binders, binding materials.
Bonds, highway:
  financial survey data—
    Minnesota 7, 8, 14, 15
    New Hampshire 31, 33, 36, 40
    New York ..... 209 (fn)
  funds for service of from State tax receipts, statistics—
    1934 193–199
    1935 238–245
  Highway Bond Calculations, publication notice 192
Brick roads, *see* Surfacing (road), types of,

Page

Bridges, sliding bearings for, coefficients of friction of, determination of, a..... 223–237
Bronze bearings (sliding), for bridges, friction tests..... 223–237
Bulking of sand as caused by free moisture..... 130
Burlap, use in roadside weed control..... 288
Burning methods and equipment used in roadside weed control..... 281, 282, 285–288, 292, 295, 298, 300
Business and pleasure foreign passenger-car traffic (Arkansas), relative division..... 127
Busses, motor:
  Arkansas traffic survey data..... 113, 119–121
  registrations and fees paid for (United States), 1935..... 137–139
  see also Common carrier motor vehicles—Trucks, motor, and busses.

C

Calcium, adsorbed ions of, as affecting characteristics of clays..... 53, 54
Calcium carbonate, action on soil..... 54
Calcium chlorate as weed killer..... 290, 294
Calcium chloride:
  effect on metal bearing plates (sliding) for bridges..... 233–235
  use—
    as dust palliative..... 61
    in absorption tests of sand..... 129
    in herbicides for roadsides..... 294
    in soil stabilization..... 47, 54, 56–58, 60, 61
Calcium hydroxide solution, effect upon cementing value of rock powders..... 55
Capillary moisture:
  action in soils..... 46, 50, 52, 53, 55–57, 60
  effects upon oil-processed road surfaces.. 69, 77–82
Carbon bisulphide as weed killer..... 289, 290, 293
Carbon contents of road tars:
  definitions..... 90(fn), 105
  free-carbon contents—
    determination of, formula..... 105
    development (comparative) in water-gas tars and coal tars..... 98, 105
    development on exposure..... 98, 100–105, 109
    indexes of increase in distillation and exposure residues..... 101–105, 109
    limitation by specifications..... 91
    relation to ductility of tar pitches..... 97
    test data for various tars..... 91, 92
    types..... 105
Carbon disulphide as weed killer, r. to p..... 300
Carpenter, C. A., joint author, a..... 69–82
"Carreteras", publication notice..... 218
Carriers, motor, *see* Busses, motor—Common carrier motor vehicles—Contract haulers (motor vehicle)—Motor-carrier tax receipts—Trailers—Trucks, motor.
Cecil soil..... 48, 49, 53
Cement, use:
  in bonded top of base course of experimental road mixes..... 77, 81
  in soil stabilization..... 45, 47, 57, 58, 60–62, 64, 65
Certificates of title (motor vehicle), receipts from, 1935..... 138
Chemical admixtures, use in soil stabilization.. 45, 47, 52, 54–58, 60, 61, 64
Chemical characteristics of soils, effects upon physical properties..... 46, 51–54, 64, 65
Chemical composition of various materials used in sliding bearings for bridges..... 224
Chemicals as weed killers..... 288–296, 298–300
Church, Elizabeth [Elizabeth C. Paddock], a... 1–17, 21–37, 40, 203–218

  property valuations—
    Minnesota..... 2, 16
    New Hampshire..... 22, 36, 37
    New York..... 203, 204, 217
  residents of—
    contributions to rural highway revenues, financial survey data..... 5, 6, 9–11, 13–17, 27, 30–37, 40, 207–212, 215–218
    motor vehicle ownership, Arkansas data 120, 122, 125, 126
    taxes paid by, motor vehicles owned by, highway use by (financial survey data)..... 1, 3–6, 8–17, 22–31, 33–37, 40, 204, 207–218
  traffic to and within, Arkansas data..113–115, 117–119
Classification(s) of highways:
  in Arkansas..... 113
  in Minnesota..... 1, 7, 8
  in New Hampshire..... 21, 22, 24, 25
  in New York..... 204, 205
  see also names of classifications and types of highways.

Page

Clay content:
  of bases of bituminous treated soil roads as affecting stability of road surfaces.. 57, 63, 256, 260–263, 266–271, 277
  of filler used in oil-processed mixtures, relation to effect of water on mixtures..... 69, 82
  of fine aggregate as affecting results of absorption tests..... 128, 129
Clays and clayey soils:
  characteristics of various clays..... 45–57, 60, 69, 249
  chemistry and physics of, r. to p..... 65
  interstitial surface area of..... 61
  sedimentation, time required as affected by temperature..... 48
  stabilization of..... 61–64
  use as binder in stabilized soil roads..... 50–61, 64, 249, 270, 271
Climate, climatic conditions:
  as affecting—
    action of chemicals in roadside weed control..... 290–296
    service behavior of tar products..... 98, 105
    weathering of soils..... 52, 53
  see also Humidity—Temperature variations.
Clinker, cementing value as affected by lime... 55
Clinometers, installation and use in study of joint design of concrete pavements 152, 153, 157, 161, 162, 164
Coal-tar creosote oils as weed killers..... 297
Coal tars and coal-tar blends for use in road construction..... 89–109
Cohesion in moist sand:
  causes..... 129, 130
  relation to water content..... 130
Cohesiveness of soils to be used as binders, tests for..... 55
Coke-oven coal tars for road use..... 89–109
Colloids, soil..... 45–49, 53–55, 64, 263
Colorado financial survey, r. to p..... 203 (fn)
Commodity transportation on highways, Arkansas data..... 114, 120–123, 125
Common carrier motor vehicles:
  busses, registrations (1935)..... 137 (fn)
  travel on highways—
    Arkansas..... 120–122, 125, 126
    Minnesota..... 16
  trucks, ownership of (city, village), New York..... 215
  see also Motor-carrier tax receipts.
Compaction:
  methods and equipment used—
    for oil-processed test paving mixtures and their relation to behavior of mixtures..... 69–82
    in cone test of sand..... 129–131
    in stabilization of soil roads..... 56–64, 256, 261, 265–269, 277
  of soils—
    at low temperatures, effects..... 64
    to maximum density at optimum moisture content..... 47–51, 57, 61–64
Compaction tests of soils..... 47–51, 57, 62–65
Composite mile of highway, construction costs of..... 83–86
Compression:
  in concrete pavement slabs—
    data from study of structural action of joints..... 157, 159, 162, 163, 176–182, 186, 187, 189, 191
    development, prevention as method of prevention of development of resisting moment in joints..... 189
  test data for materials used in sliding bearings for bridges..... 224
Compressive stresses in concrete pavement slabs as affected by joint design..... 157, 159, 162, 163, 176–182, 185–187, 191
Concrete:
  as subject of discussion at second congress of International Association for Testing Materials..... 218
  porous concrete, use to form bonded top of base course of oil-processed experimental surface..... 77, 81
  structural concrete in highway construction, cost index data..... 83–86
Concrete aggregates (fine), absorption tests.. 128–134
Concrete pavements:
  early concrete pavements..... 143–145, 148
  edge (free, joint) thickening, efficacy..... 145, 146, 162, 163, 175, 179, 183, 185–192
  movement over subgrades, length changes, as affected by joint design..... 152, 154–160, 171, 180, 183, 187–192
  structural design, a., Part 4, study of joint designs..... 143–171, 175–192
  see also Surfacing (road), types of.
Concrete reinforcement, early use in pavement slabs..... 144–146
Concrete trough (circular) for test track for bituminous mixtures..... 69, 70
Condensers, types used in distillation tests:
  of liquid asphaltic materials..... 95
  of tars (road)..... 95
Cone method for determining absorption by sand, a..... 128–134
Consolidation of compacted soils in soil tests, degree of, methods of determining.. 63
Contract haulers (motor vehicle):
  ownership, New York data..... 215
  travel on highways, Arkansas data 120–122, 125, 126

Page

Contraction:
  in bridges, provision for by sliding bearings, friction tests of bearings..... 223–237
  of concrete pavement slabs, data from study of joint design..... 148, 149, 152, 154–160, 171, 175, 180, 183, 186–192
Contraction joints in concrete pavements:
  spacing..... 175, 186, 187, 191, 192
  structural action..... 143–171, 175–192
Copper sulphate as weed killer..... 289–291
Corner loads, action upon concrete pavement slabs as affected by joint design.. 152–154, 164–171, 176, 182–186, 188–192
Corner warping of concrete pavement slabs..... 152, 161, 162, 185, 186
Corrosion:
  of dowel-plate joints, reduction..... 189, 191
  of metal bearing plates (sliding) for bridges.. 234, 237
  of metal, relation to acidity of soil..... 52, 64
  of spraying equipment by chemical weed killers, prevention..... 293, 294
Corrugations in bituminous road surfaces:
  circular track test data for road mixes.. 72–74, 76–82
  development in bituminous treated soil road..... 273
Cost data:
  for construction and maintenance of stabilized soil road..... 258, 259, 261, 264–269, 276, 277
  for roadside weed control..... 281, 284–289, 291–296, 298
  see also Cost trend index . . .—Expenditures, highway—Grade crossings—Maintenance, highway—Materials, highway—Motor-fuel taxes, collection—Motor-vehicle imposts . . ., collection . . .—Overhead, . . .—Registration fees . . ., collection. . .
Cost trend index of highway construction..... 83–86
County-aid roads in Minnesota..... 8, 10, 11
County debts, county revenues and expenditures, county taxes:
  in Minnesota..... 1–17
  in New Hampshire..... 21–26, 29, 31–35
  in New York..... 203–218
County or local obligations, State-assumed, funds for, from various tax receipts:
  1934..... 193, 194, 196, 198
  1935..... 238, 240, 242, 244
County roads:
  funds and expenditures for—
    from motor-fuel and motor-vehicle tax receipts—
      1934..... 193–199
      1935..... 238–245
      Minnesota data..... 1, 4, 5, 7–17
      New York data..... 203–218
  mileages—
    Minnesota..... 8, 9, 15
    New York..... 204, 205, 207
  surfacing, types of, New York..... 205
  travel on—
    Minnesota..... 9, 14, 15
    New York..... 207
Cover materials used in bituminous treatment of soil roads:
  cost data..... 259, 264, 268, 269
  types, quantities, sizes..... 63, 250–253, 255, 256, 259–262, 264–269, 272–277
Cracks:
  in bituminous surfaces, data for—
    bituminous soil road.. 261, 262, 264–269, 273, 274
    road mixes tested on circular track.... 74, 77–82
  in clay binder of soil roads..... 56
  in concrete pavements—
    action in restraint to warping..... 163
    see also Planes of weakness.
    control by joint design..... 143–149, 186, 188
    data for thickened end pavement slabs.. 188
    development during early curing period.. 188
Critz, Paul F., joint author, a..... 249–278
Crushed stone:
  as aggregate in stabilized soil road..... 50, 51, 61–64
  as base course material for road mixes tested on circular track..... 69, 77, 81, 82
  as cover material for bituminous treated soil road..... 250–253, 255, 256, 259–262, 264, 265, 267–269, 272–278
  cost data for cover material, South Carolina.. 264
Crushed stone sand, absorption test results..... 131–134
Curing of concrete pavements, Arlington experiments, r., r. to p..... 188
"Cut and try" method of soil road construction.. 58–61
Cutback materials:
  coal-tar cutbacks for treatment of earth roads, specification requirements.. 89, 90
  use in stabilization of experimental soil road.. 250–262, 264–269, 271–278
Cutting points in distillation tests of road tars.. 95, 96, 109

D

Davis, George W., a..... 223–237
Debts of units of government:
  highway obligations—
    funds for service of, from State tax receipts—
      1934..... 193–199
      1935..... 238–245

Debts of units of government—Continued. Page
highway obligations—continued.
per capita debts for highway purposes, financial survey data 15, 31, 214
Minnesota 1, 5, 7, 8, 14, 15
New Hampshire 23, 24, 27, 29, 31–34, 36, 37
New York 206, 207, 209, 211, 212, 214, 218
Deflections:
in concrete pavement slabs—
as affected by joint design, deflections caused by—
dowel flexure 168, 169, 188
load and by warping 152–154, 161–171, 175–178, 183, 188–192
as indicating attendant stress conditions 153, 175–178
in iron for use in sliding bearings for bridges, transverse test data 224
Deformations:
in concrete pavement slabs as affected by subgrade resistance during expansion and contraction 155, 156, 163, 187, 188
in materials used in sliding bearings for bridges, deformation limits, compression test data 224
in soils under constant load, relation to moisture content of soil 52
Density (ies):
of compacted soils—
computation, method 63
various influences affecting 46–52, 54, 56, 57, 61–64
of low-cost bituminous paving mixtures as affected by compaction method and consistency of bitumen 69, 74–76, 79
of tars (road), data for blended tars 91
Design, highway:
changes in, as affecting costs of road construction 83, 85
structural design of concrete pavements, a.; Part 4, joint designs 143–171, 175–192
types facilitating mowing of roadsides in weed control 285, 298
Diatomaceous earth 55, 56
Displacement (longitudinal, vertical) of road-mix surfaces, comparative data for water-free and wet mixtures 71–74, 78, 81, 82
Distillates of bituminous materials:
percentages, methods of reporting in distillation tests of liquid asphalts and road tars 95
specification requirements for distillates of tar products for road use 89, 90
test data for distillates of various materials 70, 91–93, 95, 109
Distillation losses of road tars, relation to:
consistency of original materials 91–93, 96–98, 108, 109
exposure losses 98–100, 104, 105, 107–109
Distillation residues of bituminous materials:
consistency of residues—
from distillation to arbitrary end temperature as representative of service behavior of tars 95, 96, 98, 100, 101, 109
of liquid asphaltic materials, classification of materials according to 97
pouring method as affecting properties of—
liquid asphaltic materials 95–97
road tars 91, 95–97, 99, 100, 109
specification requirements for tars and liquid asphalts 89, 90, 91, 97
stabilities (relative) of water-gas tar residues and coal tar residues 107, 108
test data for residues of road tars and liquid asphalts 91–93, 95–109
Distillation tests of bituminous materials:
specification requirements for—
coal-tar cutbacks for road use 89, 90
oil for use as weed killer 298
test methods used, test results for—
liquid asphaltic materials 95, 96, 109
tars (road) 91–93, 95–99, 104, 105, 107–109, 254, 255
use instead of volatilization tests of tars 95
Dowels in joints of concrete pavements:
bearing, recommendation 189, 191
bonded dowels, unbonded dowels—
data from study of joint design 145–152, 155–171, 175–185, 188–192
prevention of bond, methods 149, 150, 191
early dowels used 145, 146
flexure and effects of 168, 169, 180, 188, 189, 191, 192
looseness, effect on load transfer by joints 168, 169, 180, 188, 189
plate dowel designs, action 149, 150, 155–159, 161–168, 171, 175, 178–183, 189, 192
spacing as affecting action of joints 147, 149–152, 155–158, 160–163, 170, 171, 176–184, 188–192.
steel requirements, calculation of 191
types used in concrete slabs in study of joint behavior 149, 150
Dragging operations:
in construction of stabilized soil road 275
in roadside weed control 282, 286–288
Drainage of highways: Page
blocking of ditches by roadside weeds 282–284, 286
data for stabilized soil roads 50, 249, 250, 260–262, 264–267, 270, 274, 276, 277
relation between drainage of base courses of road-mix surfaces and stability of mixtures 81, 82
Drifts (snow, soil) caused by roadside weeds 282–285, 288
Drying methods used:
in absorption tests of sand 128–131
in plant mixing in construction of stabilized soil roads 58, 59
in soil tests 48, 57, 63
Ductility index for distillation residues of road tars 97
Ductility requirements in specifications of asphalts and road tars 97
Ductility tests of residues:
of asphalts and oils used in soil road stabilization 254
of asphalts and road tars 91, 97, 98, 109
Dust:
formation on stabilized road surfaces 56, 57, 258, 266–268, 274, 278
prevention 54, 55, 61, 63, 64, 74, 266, 274, 298
stone dust, rock dust, use in soil stabilization 47, 54, 55
Dust content of sand as affecting results of absorption tests 133

E

Earth and gravel roads:
in Georgia, r. to p 65
mileage data—
Arkansas 115, 116
Minnesota 8, 9
New Hampshire 25, 26
New York 205
United States (unimproved rural roads) 64
oil-processed gravel roads, circular track tests of, a 69–82
stabilization of 45–65, 249–278
tar products for road use, study of, a 89–109
traffic data—
Arkansas 115–118
South Carolina (soil road before and after bituminous treatment) 277
Earth as joint filler in early concrete pavements 143
Edge (free, joint) thickening of concrete pavements, efficacy 145, 146, 162, 163, 175, 179, 183, 185–192
Edge loads, action on concrete pavement slabs as affected by joint design 152–154, 164–166, 168–171, 175–186, 188–192
Edge warping of concrete pavement slabs 152–154, 158–164, 185, 189, 191
Edges:
of bituminous treated experimental soil road, failures of 260, 261, 264, 266–268, 274, 275
of concrete pavements, protection in early designs of joints 143–146
see also headings beginning Edge.
Education:
funds and expenditures for, 1932—
Minnesota 1, 3–7, 9, 16
New Hampshire 23, 24, 31–33, 35, 40
New York 203, 205, 209–211, 213, 214, 217, 218
funds for, from State motor-fuel and motor-vehicle tax receipts—
1934 193, 195, 197, 199
1935 239, 241, 243, 245
Elastic soil (Manor series) 48, 49
Electrical apparatus used:
for drying of sand in absorption tests 130, 131
in compaction of aggregates for bituminous paving mixtures 75
Electrical attractions in soils, electrochemical characteristics of soils 45, 46, 52–55, 64
Electrolytes, use in soil stabilization 47, 54–57, 61–64
Electrolytic action, effect on unlike materials in contact in the presence of salt water or salt air, data for sliding bearings for bridges 223, 224, 233–237
Emulsifying of bitumen in oil-processed roads under action of traffic 80, 81
Emulsions, use:
in roadside weed control 290, 297, 298
in stabilization of soils 58, 62, 64
Erosion (soil) on roadsides, prevention by weeds 281, 287, 298
Evaporation:
as cause of changes in tar products under service conditions 98, 105
of soil moisture 47, 50, 56, 61, 62, 64, 260
Excavation requirements, highway construction cost index data 83–86
Expansion:
of concrete, data from study of joint design 148, 149, 152–160, 175, 187, 188, 191, 192
of soils, prevention by cohesive binders 57
Expansion joints in concrete pavements:
spacing 144, 146, 147, 175, 186, 187, 191
structural action 143–171, 175–192
Expenditures, highway: Page
relation to —
other public expenditures, 1932—
Minnesota 1, 3–7, 9, 16
New Hampshire 31–33, 35–37, 40
New York 205–214, 217, 218
population, highway taxes, and highway use—
Minnesota 1–17
New Hampshire 21–37, 40
New York 203–218
sources of funds—
Minnesota 8, 9, 12, 13, 16, 17
New Hampshire 26, 27, 29–31, 34–37, 40
New York 203, 207–209, 211–218
see also Assessments, special — Bonds, highway — Federal-aid highway projects, . . . —Motor-vehicle imposts . . . — Property taxes — United States Public Works road construction, . . . — United States Works Program highway projects, . . .
total and per capita highway expenditures, 1932—
Minnesota 1, 3–9, 11–17
New Hampshire 21, 23, 26, 29, 31–37, 40
New York 205–211, 213–218
Exposure losses of tars (road), relation to—
distillation losses 98–100, 104, 105, 107–109
stability, Hubbard-Field test data 107, 108
Exposure residues of tars (road), test data 91, 99–109
Exposure tests:
of bituminous materials—
equipment for 98, 99
liquid asphaltic materials 98, 108, 109
tars, road 91, 97–109
of metal bearings (sliding) for bridges 223, 224, 226, 228, 231, 233–237
Extraction test results for bituminous mixtures used in stabilized soil road 257, 260, 262, 274

F

Farm roads, construction, by "cut and try" method 58–61
Farms, motor vehicles owned on:
Arkansas data 120, 122, 125, 126
see also Rural areas, residents of,—taxes paid by, motor vehicles owned by, . . .
Federal-aid highway funds:
in Arkansas 113
in Minnesota (1932) 8, 9, 12, 13, 16
in New Hampshire (1932) 33, 34, 36, 37, 40
in New York (1932) 207–209, 211, 217, 218
see also Federal-aid highway projects, . . .
Federal-aid highway projects, current status, statistics by States 18, 41, 66, 87, 111, 140, 172, 200, 219, 246, 279, 301
Fees, motor vehicle, *see* Motor vehicle imposts . . . —Registration fees, . . .
Felt (tarred), use in joints of concrete pavements 150, 152, 162, 180
Ferric chloride, use in soil stabilization 57
Fillers, filling materials, types used:
in oil-processed mixtures tested on circular track 69, 76, 82
in soil stabilization 47, 50, 51, 54, 61, 63, 64
Films:
of adsorbed air in soils 45, 54
of adsorbed water—
as cause of cohesion in moist sand 130
in soils 45–48, 50, 54, 55, 57, 62, 64, 65
of insoluble adhesives on soil grains, relation to resistance of soil to capillary moisture 57
of tars and liquid asphaltic materials, exposure tests 91, 98–105, 108, 109
Financial surveys (for 1932):
Minnesota 1–17
New Hampshire 21–37, 40
New York 203–218
Fineness moduli of sands:
relation to absorption 130, 131
values for sands used in absorption tests by cone method 131
Finishing methods as affecting friction of sliding bearings for bridges 223–234, 237
Fire hazards from roadside weeds, firebreaks, burning of weeds 281, 282, 285–288, 290, 292, 294–296, 298–300
Flash points of bituminous materials, data for various materials 70, 254, 298
Flexure:
dowel flexure in joints of concrete pavements 168, 169, 180, 188, 189, 191, 192
of slab edges and corners in concrete pavements, provision for in joint design 186
Float tests of bituminous materials:
data for—
liquid asphaltic materials 69, 70, 73, 74, 97, 254
materials used in—
mixtures tested on circular track 69, 70, 73, 74

Float tests of bituminous materials—Contd. Page
data for—continued.
materials used in—continued.
stabilization of experimental soil road 250, 254, 255
tars, road 89–95, 106, 107, 250, 255
specification requirements for road tars 89, 90, 93, 95
Flocculation of clay soils 53, 54
Fluorescence of tar products, exposure test data 101–103
Fluxes:
specifications for fluxes for coal-tar cutbacks 89, 90
types used in road tars 89–91
Foreign (out-of-State) motor vehicles:
highway use by, motor vehicle imposts paid for (1932)—
in Minnesota 8, 11, 15
in New Hampshire 22, 25–29, 33
in New York 208, 212, 215
origin and destination of, interstate traffic, Arkansas data 113, 115, 118, 120–122, 124–127
registrations, 1932—
in Minnesota 10
in New York 212
Forest products, transportation on highways (Arkansas) 120–123, 125
Forest roads, *see* Park and forest roads, etc.
Freezing and thawing as affecting service behavior of stabilized soil roads 51, 269
Freezing points of free water and of adsorbed films of water in soils 46
Friction:
coefficients of, determination for sliding bearings for bridges—
a 223–237
apparatus used 224, 225
internal friction in soils as affected by admixtures 64
surface friction, r. to p 65
Frictional resistance as affecting action of joints in concrete pavements 158, 163
Fruit transportation by motor truck (Arkansas) 114
Fuel, motor, *see* Motor-fuel consumption—Motor-fuel taxes.
Fuel oil, use in manufacture of water-gas tars 89

G

Gas-house coal tars for road use 89–109
Gasoline:
as weed killer 285
see also Motor-fuel consumption—Motor-fuel taxes.
Goode, J. F., joint author, a 69–82
Government:
expenditures for (1932)—
in Minnesota 1, 3–7, 9, 16
in New Hampshire 31–33, 35, 40
in New York 203, 209–211, 213, 214, 217
units of, imposts levied by and expenditures by (1932)—
in Minnesota 1–17
in New Hampshire 21–37, 40
in New York 203–218
Grade crossings:
expenditures for, New York (1932) 206, 209, 218
United States Works Program grade crossing projects, current status 20, 43, 68, 142, 174, 202, 221, 248, 303; rear covers of Nos. 4, 5, 11.
Grading:
blading operations, grading operations, in stabilization of soil roads 59, 62, 63, 250, 266, 269, 276
of aggregates—
as affecting cone test results in tests of absorption of sand 130, 131
gradings used—
for cover material in bituminous treatment of soil roads 62, 251–253, 255, 256, 261, 264, 267–269, 273, 274, 277
in bituminous mixtures tested on circular track 69
in stability test specimens of tar mixes 106
well-graded material for stabilization of soil roads 47, 50–52, 56, 58–64
of bituminous mixtures as analyzed during and 7 years after construction of bituminous treated soil road 257, 262
of soils, effect on relations between density and moisture content 51, 52, 56, 64
Grain size accumulation curves of sand admixtures for stabilized soil roads 51, 52
Granite:
cementing value, increase by addition of limestone 55
use as cover material in bituminous treatment of experimental soil road 250–253, 255, 256, 259, 261, 264, 267–269, 272, 273, 276, 277.
Grants and aids, *see* County-aid . . .—County or local obligations, State-assumed, . . .—Federal-aid . . .—State-aid . . .—Unemployment relief, . . .
Granular material:
action under traffic 56, 60
use as admixture in soil stabilization 45, 50, 51, 58–61, 64

Page
Grass, grasses (roadside) 285, 288–291, 298–300
Gravel:
cost data (South Carolina) 259, 264
use—
as admixture in stabilization of soil roads 50, 51, 59, 61, 64
as cover material in bituminous treatment of experimental soil road 250–252, 256, 259, 261, 264, 274–276
Gravel base courses, use for bituminous mixtures tested on circular track 69–80, 82
Ground water, occurrence in the United States, r. to p 65
Gum, use as joint filler in concrete pavements 143
Gumbo soils, stabilization methods 62, 63
Gypsum as filler in soil roads 54

H

Hagerstown soil 53
Hardening of bituminous materials:
as affected by pouring method in distillation tests 95–97, 99, 109
causes other than loss of volatile materials 93, 95–99, 103, 105–109
comparative data for—
exposure residues and distillation residues of road tars 98–100, 104, 105, 108, 109
liquid asphaltic materials and road tars 96–98, 108, 109
Hardness of road tar mixtures, relation to ductility of tars 97, 98
Harrowing, methods and equipment used:
in roadside weed control 285, 288
in stabilization of soil roads 58–63, 250, 266
Herbicides, use on roadsides 281–300
Highway Research Board, annual meeting, notice of 127, 192
Hogentogler, C. A., joint author, a 45–65
Honing (mulch), tars for use in 90
Hubbard-Field stability tests of bituminous mixtures:
data for—
bituminous mats of stabilized soil road 262, 274
oil-processed mixtures and mortars used in circular track tests 76, 77
tars and their distillation residues 91, 99, 105–109
testing equipment—
description 38
dimensions of, as affecting stability values, a 38–40
Humidity:
as affecting action of herbicides in roadside weed control 290–296
as aid in application of chemical admixtures to soil roads 61
humidity chart for United States, June to September 1930–1933 294, 295
typical hourly changes in temperature and relative humidity during summer months (4 States) 296
Humus (neutral), formation 54
Hydration of soil colloids as affected by temperature 48
Hydrogen ions in soils and effects of 52–54
Hydrometer method of soil analysis, use, r 50

I

Illinois financial survey, r. to p 21(fn), 203(fn)
Imposts, *see* names of imposts—*also* Taxes and imposts.
Improvement, highway:
improved roads in—
Arkansas 115–117
Minnesota 4, 8, 9
New Hampshire 23–26
New York 204, 205
South Carolina 249–278
indexes of highway construction costs 83–86
stabilized soil roads 45–65, 249–278
weed control, roadside 281–300
Indexes of highway construction costs, a 83–86
Insulation of concrete pavement slabs during curing period 188
Intermolecular reactions as cause of changes in tar products under service conditions 98
International Association for Testing Materials, second congress, notice of 218
Interstate traffic, *see* Foreign (out-of-State) motor vehicles.
Interstitial surface area of soils (sand, silt, loam, clay) 61
Iredell soils 48, 49, 53, 54
Iron and alumina content of soils as affecting character of soil 52, 53
Iron bearings (sliding) for bridges, friction tests and exposure tests 223–234, 237
Iron sulphate as weed killer 289–291

J

Joint Committee on Methods of Test for Specific Gravity of Aggregates, test method tentatively adopted by 134
Joint fillers for concrete pavements 143–145, 150, 152, 156, 157, 162, 180, 191

Joints in concrete pavements: Page
air chambers in patented designs 145, 146
butt joints 150, 160, 162, 163, 167, 168, 170, 177, 180–183, 189–191
costs, r. to p 188(fn)
design—
as affecting structural action 143–171, 175–192
improvements suggested 175, 186, 188–192
patents 143–148
types used in study of structural action of joints 149, 150
diagonal joints 144
doweled joints, dowel-plate joints 145–152, 155–171, 175–185, 188–192
edges of, protection of, in early pavements 143–146
efficiency—
seasonal variations in 180, 183, 185
variation with distance between load and nearest dowel 178, 179, 182
functions 149, 175, 186, 191, 192
hinge type 148
installation 149–152, 187–189, 191
interlocking types, tongue-and-groove joints 145–147, 150, 151, 160, 163, 167, 168, 170, 175, 180–183, 189–192.
load transfer by 145–150, 152, 153, 159, 164–171, 175–186, 188, 189, 191, 192
metal plates, strips, and bars 143–152, 155–159, 161–168, 170, 171, 175, 178–183, 189–192
sealing of 145, 146, 148, 159, 188, 189
spacing—
practice, development of 143, 144, 146–149
recommendations 175, 186–188, 191
specifications 144, 145
thickening of slab ends at transverse joints, effects 145, 146, 149, 150, 154–159, 164–166, 175, 178, 179, 182, 183, 188, 192
weakened-plane joints 145, 149–151, 155–171, 175, 178–183, 189, 191, 192
widths—
changes in and their effects upon joint action 144, 145, 147, 149, 150, 152, 154–161, 170, 171, 175, 176, 178–180, 182, 183, 187–192.
of joints in early pavements 143–147
requirements, Federal 147

K

Kerosene:
as weed killer 289, 298
kerosene method of determination of absorption and specific gravity of fine aggregates 128, 129, 131–134

L

Labor, labor costs:
in highway construction—
costs of labor, supplies, and equipment in bituminous treatment of soil road 264–269
indexes of highway construction costs 83–86
in roadside weed control 284, 287, 288, 293, 294
Landscaping in roadside development 282, 285, 299
"Laterites" 53
Law (highway), highway legislation, r.:
Arkansas 113 (fn)
New Hampshire 21, 22, 24, 28
New York 207
roadside weed destruction 282
Lead bronze sliding bearings for bridges, friction tests 223–228, 233
Leveling, bench marks used in, preservation of, a 110
Lewis, R. H., joint author, a 89–109
Licenses and permits:
motor-fuel distributors' and dealers' licenses, receipts from (1935) 136
see also Registration fees, license and permit fees (motor vehicle).
Lime:
affinity of hydrated lime for water, for asphalt 54
use in soil stabilization 47, 54, 55, 57, 58
Limestone base courses, use for road mixes tested on circular track 77, 80–82
Limestone dust:
affinity for water, for asphalt 54
use—
as aggregate in bituminous mixtures tested for stability 39
in soil stabilization 47, 54, 55, 57
Limestone sand, absorption test results 131–134
Limestone screenings, use as top dressing for macadam roads 55
Limewater, effect upon cementing value of rock powders 55
Lip-curb design of concrete pavements, data from study of structural action of joints 171, 183
Liquid asphaltic materials:
classification according to consistency of distillation residues 97
consistency tests 93–98
distillation test method 96
ductility requirements of residues of 97
exposure test data 108, 109
hardening 96–98, 108, 109
stability tests of mixtures containing 39, 40, 69–82, 106, 108, 109

Liquid asphaltic materials—Continued. Page
use—
in road mixes tested on circular track ... 69–82
in stabilization of experimental soil roads ... 62, 63, 249–278
Liquid limit(s) of soils:
definition ... 55
high liquid limits, causes ... 55, 56
lower liquid limit, true ... 46
test, importance in selection of binders for soil roads ... 55, 56
values for various soils ... 49, 69, 263
Liquid temperature(s) in distillation tests, relation to vapor temperature(s), data:
for liquid asphaltic materials ... 95, 96
for tars ... 95, 96, 109
Lithium, adsorbed ions of, as affecting characteristics of clays ... 53
Load-carrying capacity of concrete pavements:
as indicated by combined stresses (load, warping) ... 184, 185
see also other headings beginning Load.
Load-deflection relations in concrete pavement slabs as affected by joint design ... 152, 153, 164–171, 175–178, 188
Load stresses in concrete pavements as affected by:
joint design ... 147–154, 164–171, 175–192
position of load ... 152, 153, 164–171, 176–189, 191, 192
Load transfer by joints in concrete pavements ... 145–150, 152, 153, 159, 164–171, 175–186, 188, 189, 191, 192.
Loads:
axle loads of motor trucks, traffic survey data (Arkansas) ... 120–126
loads carried by motor trucks and truck-trailer combinations on Arkansas highways, nature and weights ... 114, 120–126
loads used in—
compaction of stability test specimens of bituminous mixtures ... 39, 76, 106, 262, 263
friction tests of sliding bearings for bridges ... 223–231, 237
molding machine for road mixes ... 74
soil tests ... 58
Loam:
interstitial surface area ... 61
silt-loam (Arlington soil), test data ... 48, 49
Loan and reserve funds, use for highways:
Minnesota ... 9, 12, 13, 16
New Hampshire ... 34, 36, 37, 40
New York ... 207–209, 217
Local roads and streets:
administration and finance—
funds for, from various State imposts on highway users (United States)—
1934 ... 193–199
1935 ... 238–245
in Minnesota ... 1–17
in New Hampshire ... 21–37, 40
in New York ... 203–218
mileages—
Arkansas ... 113, 115–118
Minnesota ... 8, 9, 15
New Hampshire ... 24–26, 33
New York ... 204, 205, 207, 217
of unimproved rural roads in United States ... 64
Longitudinal joints in concrete pavements:
data concerning early pavements ... 143–146
efficiency as compared with that of transverse joints ... 143, 152, 153, 159–163, 170, 171, 176–183, 185
structural action ... 143–146, 149–154, 159–163, 166–171, 175–192
Loss data for bituminous materials, *see* Distillation losses . . .—Exposure losses . . .—Volatile matter, losses . . .
Low-cost roads:
in Minnesota ... 8, 9
in New Hampshire ... 25, 26
in New York ... 204, 205, 207
oil processed roads, circular track tests of ... 69–82
stabilized soil roads ... 45–65, 249–278
see also Earth and gravel roads.
Lubricants:
effect on friction of sliding bearings for bridges ... 223–233, 237
type used in friction tests of sliding bearings for bridges ... 226, 230, 237
Lubricating properties in soils, relation to moisture content ... 52, 64

M

Macadam roads:
tars for use in penetration macadam ... 89–109
see also Surfacing (road), types of.
Magnesium, adsorbed ions of, as affecting plasticity and slaking time of soils ... 53
Magnesium chlorate as weed killer ... 290, 294
Magnesium chloride, use:
in stabilization of soil roads ... 56
with herbicides ... 294
Maintenance, highway:
legal provisions for, in New York ... 207
maintenance methods and costs, data for—
bituminous treated soil road ... 249, 250, 256, 258–261, 264–271, 274–277
Maintenance, highway—Continued. Page
maintenance methods and costs—con.
Minnesota highways ... 5, 8, 10–14
New Hampshire highways ... 21, 22, 24, 33, 34
New York highways ... 203–207, 218
weed control ... 281–300
maintenance of admixture treated soil road ... 56, 59, 61
materials (tar products) for use in ... 89–109
Mallet and cylindrical mold, use in compaction of bituminous mixtures, effectiveness ... 74–76
Manor soil, test data ... 48–50
Manufactured products, transportation on highways (Arkansas data) ... 120–123, 125
Marking of highways, *see* Numbering of highways.
Materials, highway:
costs of and quantities used as affecting costs of highways ... 83–86, 205, 259, 264–269, 276
local materials, use of ... 22, 64, 83, 249, 250
transportation on highways (Arkansas data) ... 120–123, 125
see also names of materials.
Mechanical analyses:
of aggregates used—
as cover material in stabilized soil road ... 256
in bituminous mixtures tested on circular track ... 69
of soils, test data for various soils ... 49, 51, 256, 263
Metal bearings (sliding) for bridges:
as affected by exposure to salt water, salt air ... 223, 224, 233–237
coefficients of friction of, determination of, a ... 223–237
Metal plates, strips, and bars in joints of concrete pavements ... 143–152, 155–159, 161–168, 170, 171, 175, 178–183, 189–192
Micaceous soils ... 48–50, 55, 56
Michigan financial survey, r. to p ... 21 (fn), 203 (fn)
Micrometer calipers, use, r ... 226, 234
Micrometer dials, micrometers, use, r ... 152, 161, 225, 226
Mile of highway (composite), indexes of price, usage, and cost trends ... 83–86
Mileage data, highway:
by system and type of surfacing—
Arkansas ... 113, 115–118
Minnesota ... 1, 8, 9, 15
New Hampshire ... 21, 24–26, 33
New York ... 204, 205, 207, 217
for unimproved rural roads in United States ... 64
see also Federal-aid highway projects—United States Public Works road construction—United States Works Program highway projects.
Milled finishes as affecting friction of sliding bearings for bridges ... 224–228, 230–233, 237
Mineral products, transportation on highways (Arkansas data) ... 120–123, 125
Minnesota financial survey, a ... 1–17
Minnesota highway system ... 7, 8
Mixed base experiments in stabilization of soil road ... 249–278
Mixed-in-place bituminous road surfaces, stabilized soil roads; materials for use in ... 62, 63, 65, 89–109, 250, 254, 255
Mixed surface treatment and retreatment of experimental soil road ... 249–278
Mixes, mixing methods and equipment used for oil-processed mixtures tested on circular track ... 70, 78, 79
stability test specimens of bituminous mixtures ... 39, 76, 91, 106
stabilization of soil roads ... 50–52, 58–65, 249–278
Moisture, *see* headings beginning Moisture, Water—*also* Capillary moisture—Humidity—Warping . . .—Water.
Moisture contents:
of aggregates (fine), determination by absorption tests ... 128–134
of oil-processed surfacing mixtures, limitation in specifications ... 82
of soils—
as affected by chemicals ... 56, 57
determination method ... 63
lubricating effect of ... 52, 64
optimum moisture content ... 47–51, 57, 61–64
relation to—
deformation under constant load ... 52
performance of soils in stabilized soil roads ... 45–65

traffic data for Arkansas ... 113, 119, 120, 124–127
travel, annual, in—
Minnesota ... 9, 10, 14–16
New Hampshire ... 27–29
publicly owned vehicles, registrations, United States, 1935 ... 137
see also other headings beginning Motor, *also* names of types of motor vehicles, *also* Foreign (out-of-State) motor vehicles.
Mowing methods and equipment in roadside weed control ... 281, 282, 284–286, 288–291, 298–300
Mud:
bitumen content and water content of mud ejected through cracks in bituminous mixtures tested on circular track ... 80, 81

Mud—Continued. Page
mud layers on soil roads which have been treated with chemicals 56
Mulch honing, tar for use in 90

N

Naphthalene in road tars, limitation of, in specifications 89
Nebraska formula for bitumen requirements in stabilization of soil roads 274
Neutralizers, use in soil stabilization 47, 54, 55, 61, 63
New Hampshire financial survey, a 21–37, 40
New Hampshire highway system, classifications and mileages 21–26, 33
New Mexico financial survey, r. to p 203 (fn)
New York financial survey, a 203–218
New York highway system, classifications and mileages 204, 205, 207, 217
Normann, O. K., a 281–300
Numbering of highways, numbered routes:
in Arkansas, traffic data 113–127
in Minnesota 7
in New Hampshire 21, 24, 25, 34
legal status of numbered highways, lack of—
Arkansas 113
New Hampshire 21

O

Oil:
transportation on highways (Arkansas data) 114, 120, 122, 123, 125
types used—
as joint fillers in early concrete pavements 143
in bituminous treatment of experimental soil road (South Carolina) 250
in manufacture of water-gas tar 89
in road mixes tested on circular track 69, 70
use in—
roadside weed control 285–287, 289, 290, 294, 297–299
stabilization of soil roads 54, 58, 62–65, 249–278
see also headings beginning Oil, Oiled—*also* Kerosene—Liquid asphaltic materials.
Oil burners for roadside weed eradication 285–287
Oiled earth roads, soap pretreatment of 54, 65
Oil-processed surfacing mixtures:
circular track tests of, a 69–82
moisture content limit 82
Organic matter (insoluble) in bitumens as affecting changes under service conditions 98
Overhead, cost data for highway construction and maintenance:
Minnesota 11, 13, 14
New Hampshire 21, 33
New York 206, 207
Overloading of motor trucks, overloaded trucks, Arkansas traffic survey data 122, 123
Oxidation as cause of hardening of road tars under service conditions 98, 103, 105, 109
Oxides, iron and aluminum, in soils 52, 53

P

Paddock, Elizabeth C. [Elizabeth Church], a 1–17, 21–37, 40, 203–218
Paper, use in roadside weed control 288
Parabolic design of concrete pavements (test section no. 4), use in study of structural action of joints 159
Park and forest roads, etc.:
funds for, from State motor-fuel and motor-vehicle receipts—
1934 193, 195, 197, 199
1935 239, 241, 243, 245
in Arkansas 113
Patrol maintenance of highways, r 22, 256
Pauls, J. T., a 38–40
Peabody, L. E., a 113–127
Peaty substances in soils, liquid limits indicative of 56
Peeling of bituminous paving mixtures, data for:
mats of stabilized soil roads 260, 266
road mixes tested on circular track 77, 79, 81
Penetration of distillation residues of tars, relation to stability of road mixes 106–109
Penetration tests of residues of:
liquid asphaltic materials 96–98
tars, road 91, 96–101, 104–109
Permit fees, motor vehicle, *see* Registration fees, license and permit fees (motor vehicle).
Petroleum admixtures in road tars, detection by specific gravity tests of distillates 93
Phosphor bronze sliding bearings for bridges, friction tests 223–228, 231–233, 237
Pitch, use as joint filler in early concrete pavements 143
Pitting:
of bituminous treated soil road as caused by clay balls 262
of road mixes tested on circular track 81, 82
of stabilized soil roads as evidence of too slight crowns 59
Pittsburg (Calif.) test road 145

Page
Planed finishes as affecting friction of sliding bearings for bridges 223–233, 237
Planes of weakness as joints in concrete pavements, action 145, 149–151, 155–171, 175, 178–183, 189, 191, 192
Planished finishes as affecting friction of sliding bearings for bridges 223–233, 237
Planning of highways, *see* Arkansas traffic survey, . . . —Financial surveys . . .
Plant mixing in construction of stabilized soil roads 58–61
Planting for roadsides 281, 282, 285, 288, 289, 292, 299
Plasticity indexes of soils:
definition 55
test data for various soils 49, 69, 263
values indicating sufficient binder cohesion for soil road surfaces 55, 56
Plasticity needle, use in soil test 47, 48, 63
Plasticity of soils, plastic limits of soils 45–49, 52, 53, 55–57, 61, 63, 64
Plasticity tests of soils, r. to p 55, 64
"Podsols", characteristics 53
Poise (absolute viscosity of bituminous materials), new viscosimeter for measuring 95
Poisson's ratio, application in computation of strains in concrete caused by restrained warping 163
Police, highway:
funds for, from State motor-fuel and motor-vehicle imposts—
1934 193, 194, 196, 198
1935 238, 240, 242, 244
Poll taxes, New Hampshire 26, 27
Polymerization as cause of changes in tar products under service conditions 98, 103, 105
Population, distribution of, relation to:
highway use, Arkansas 115, 118
taxation, highway expenditures, and highway use—
Minnesota 1–17
New Hampshire 21–37, 40
New York 203–218
Pot holing:
of road-mix surfaces tested on circular track 77, 81
of stabilized soil roads 61, 260, 264–267, 275
Potassium, adsorbed ions of, as affecting plasticity and slaking time of soils 53
Potassium chlorate as weed killer 290, 294
Pouring methods in distillation tests of bituminous materials and effects upon properties of:
liquid asphaltic materials 95–97
tars 91, 95–97, 99, 100, 109
Pressure(s):
application methods and applied pressures in friction tests of sliding bearings for bridges 223–231, 237
atmospheric pressure as cause of cohesion in moist sand 130
for use in spraying weeds with oils 294, 298
internal pressure in moist sand as cause of cohesion of sand 130
on adhesive films of moisture in soils 47
used in molding of stability test specimens of bituminous mixtures 39, 76, 106, 262, 263
Price trend index of highway construction 83–86
Primes and fillers used in soil stabilization 47, 50, 51, 54, 61, 63, 64
Priming materials, bituminous:
tars, study of 89–109
types and quantities used in treatment of experimental soil road 250–256, 260, 261, 267–269, 272
Proctor soil tests 47–51, 57, 62–65
Profilometer, recording 71
Profilometer records of road mixes tested in circular track 71
Property, assessed valuations of (1932):
Minnesota 2, 16
New Hampshire 22, 34, 36, 37
New York 203, 204, 217
Property taxes:
general property taxes—
per capita property taxes—
Minnesota 3, 6
New Hampshire 26, 27, 35
New York 208, 210, 211, 213, 214
rates (actual and those required if all taxes were levied on general property)—
Minnesota 3, 4, 8, 9
New Hampshire 25–27
New York 204, 211, 212
revenues from (1932)—
relation to revenues from all imposts—
Minnesota 2–4, 6, 16
New Hampshire 25–27, 35
New York 204, 209–214, 216, 218
use for highway purposes—
Minnesota 6, 8, 9, 11, 13, 15–17
New Hampshire 24, 26, 27, 33–37, 40
New York 207–209, 215–218
taxes levied specifically for highway use—
Minnesota 6, 8, 9, 11, 13
New Hampshire (negative) 34
New York 207–209

Property taxes—Continued. Page
governmental agencies levying—
Minnesota 2, 8
New Hampshire 22, 23
New York 210, 211
personal property taxes on motor vehicles—
Minnesota 8, 11–
New Hampshire 24, 29
Proportioning:
of bituminous mixtures, proportions used for—
road mixes tested on circular track 69, 70
various stability test specimens 39, 76, 77, 106
of road soils in stabilized soil roads 45, 47, 50–52, 56–64
Public benefit, revenues and expenditures for (1932):
Minnesota 1, 3–7, 9, 16
New Hampshire 23, 24, 31–33, 35, 40
New York 203, 205, 209–214, 217, 218
Public Roads, publication in Spanish, notice of 218
Pug mixers, use in stabilized soil road construction 59, 63
Putnam soil, characteristics 48, 49, 53
Pyridine as solvent in tests of road tars 105

Q

Quarry waste, use in stabilization of adobe soil 62

R

Railroad service, motor truck and bus contact with (Arkansas) 120
Railroad taxes:
in Minnesota 3
in New Hampshire 26, 27
Rammer for use in soil compaction tests 47
Rappleye, Howard S., a 110
Raveling of road surfaces, data for:
bituminous road mixes tested on circular track 71–74, 77, 78
stabilized soil roads 56, 57, 262, 264, 266, 268, 269, 272, 274
Raylig, use as admixture in road soils 57
Registration fees, license and permit fees (motor vehicle):
bases for—
Minnesota 8
New Hampshire 27, 29
New York 215
collection costs—
Minnesota 8
New Hampshire 27
New York 216
United States (1935) 138, 139
payments (1932)—
by nonresidents—
Minnesota 8, 11
New Hampshire 27
New York 208, 215
per vehicle payments—
Minnesota 8–11
New Hampshire 27–30
New York 208, 215, 216, 218
receipts from, data for—
Minnesota (1932) 8–11, 15
New Hampshire (1932) 24, 26–31, 36
New York (1932) 204, 208, 215, 216, 218
United States, statistics by States (1935) 138, 139
Registrations, motor vehicle:
California 127
Minnesota (1932) 8–11
New Hampshire (1932) 27–31
New York (1932) 212, 214–217
United States—
statistics by States (1934, 1935) 137
transfers, reregistrations, and fees paid for (1935) 137 (fn), 138
Relief funds, *see* Unemployment relief, . . . —United States Public Works road construction, . . . —United States Works Program highway projects, . . .
Repair work, road:
patching of soil roads treated with calcium chloride, recommendation 61
retreatments of bituminous treated experimental soil road 250–255, 258–261, 264–269, 272–278
tars for use in 89–109
Residues of bituminous materials, data for:
distillation residues of—
liquid asphaltic materials 95–97
tars, road 89–93, 95–109
exposure residues of road tars 91, 99–109
residues of materials used in—
road mixes tested on circular track 70
stabilization of experimental soil road 254, 255, 271, 272
Retail delivery by motor trucks (Arkansas) 120–123
Retread road surfaces:
in Arkansas (mileage and traffic data) 115, 116
tars, for use in 89–109
Revenues, highway:
flow of highway funds from cities to rural areas—
Minnesota 5, 6, 9–17
New Hampshire 27, 30–37, 40
New York 207–212, 215–218

Revenues, highway—Continued. Page
Minnesota (1932) 1–17
New Hampshire (1932) 21–37, 40
New York (1932) 203–218

Rust, effect on friction of metal bearings (sliding) for bridges 223–226, 228, 231–233, 237
Rutting:
of bituminous mixtures tested on circular track 71–74, 76–82
of soil roads—
data for bituminous treated experimental soil road 249, 265, 268, 274
r 45, 56

S

Salt solution, use in absorption test of sand 128, 129, 132
Salt water, salt air, effect on metal bearing plates (sliding) for bridges 223, 224, 233–237
Salts: Page
sodium chloride, use—
as weed killer 289, 291, 296
in soil stabilization 47, 54, 56, 57, 61
types and amounts used as admixtures in soil roads 47, 54–57, 61, 64
Sand-asphalt base, use in repairing surface treated soil road 269
Sand-clay-gravel base, use for road mixes tested on circular track 69–80, 82
Sand-clay roads:
in Georgia, r. to p 65
in South Carolina, stabilization of 58, 249–278
Sand contents of soils, test data for various soils 49, 51, 256, 263
Sand-cutback-asphalt mat, used over old surface of soil road 276
Sands and sandy soils:
absorption of water by fine aggregates—
determination by cone method, a 128–134
tests (various), review of 128, 129, 131–134
adsorption of water 130
beach sands (Florida), stabilization 54
"blow sands" (Nebraska), stabilization 54
composition of sands used in absorption tests 131
cost data for cover material used on bituminous treated soil road 264
sandy-soil roads in South Carolina, stabilization of 58, 249–278
sandy subgrades, improvement by addition of binder 58
saturated and surface-dry condition of fine aggregates, methods for determining 128–134
sedimentation, time required as affected by temperature 48
surface area of sand grains—
as influencing results of absorption tests of sand by cone method 130
interstitial surface area of cubic foot of sand 61
use—
as admixtures, as fillers, in soil stabilization 50–52, 54, 58–64
as aggregate in various bituminous mixtures tested for stability 39, 69, 76, 91, 106
as cover material in bituminous treatment of soil road 250–252, 256, 259, 261, 264–267, 274–276
in crushed limestone base courses of road mixes tested on circular track 77, 81
weights in saturated and in surface dry conditions, differences as measures of absorption 128–130
Saturation capacity of tropical soils, r. to p 65
Scarifying operations and equipment in stabilization of soil roads 59, 62, 63, 250, 265–269
Seal coats of bituminous roads:
data for stabilized soil roads 63, 251–255, 260, 261, 264, 267–269, 272, 274
tars for use in 89–109
Sediments from soil suspensions:
data for silt containing calcium clay 53
properties at various moisture contents 46, 47
settlement time required as affected by temperature 48
Service behavior:
of oil-processed roads, circular track test data 69–82
of stabilized experimental soil road in South Carolina 249, 258, 260–262, 264–278
of tar mixtures as indicated by study of road tars 89–109
Settlement of soils from soil suspensions 46–48, 53
Shales, types unsuitable for use in stabilized soil roads 51
Shear resistance by joints in concrete pavements, load transfer by joints 145–150, 152, 153, 159, 164–171, 175–186, 188, 189, 191, 192
Shear strength of soils, increase through soil stabilization 45, 50
Shoving:
of bituminous surfaces of stabilized experimental soil road 261, 266, 268, 269, 272–274, 278
of oil-processed paving mixtures, circular track test data 71–74, 76, 77, 80–82
Shrinkage of soils:
as affected by—
admixtures 56, 58
adsorbed ions 53
as indicative of detrimental volume change 52
shrinkage limits 47, 49, 263
shrinkage ratios 49, 263
Silica:
affinity for water, adsorption of water 54, 130
silica content of soils—
as product of weathering 52, 53
low silica types of soils, usefulness as binders in soil roads 64
Silts and silty soils:
interstitial surface area 61
sedimentation, time required as affected by temperature 48
Silts and silty soils—Continued. Page
silt content of various soils 49, 51, 69, 249, 256, 263
stabilization 58, 249–278
use as filler in—
bituminous mixtures tested on circular track 69, 82
soil stabilization 50, 51
Slag:
cementing value as affected by addition of lime 55
use in soil stabilization 47, 50, 51, 54, 57, 61, 64
Slaking:
of clay soils—
data for South Carolina clay 249
slaking time as affected by adsorbed ions 53
of silt soil as affected by admixtures 58
Sligh, H. L., joint author, a 249–278
Slipperiness of soil road surfaces after bituminous treatment, remedial measures used on experimental road 265, 266
Slump(s) of sand in cone method of absorption tests 129–131
Smothering of roadside weeds 281, 282, 288
Snow removal as highway maintenance expenditure:
Minnesota 12
New York 206, 218
Snowdrifts caused by roadside weeds 282–285, 288
Soap, use:
in soil stabilization 47, 54, 65
with arsenical herbicides 292
Soda ash as admixture in road soils 57
Sodium, adsorbed ions of, as affecting swelling and slaking of clays 53, 54
Sodium carbonate, use with herbicides 294
Sodium chlorate as weed killer 289–292, 294–296, 298–300
Sodium chloride:
as admixture in soil roads 47, 54, 56, 57, 61
as weed killer 289, 291, 296
effect on metal bearing plates (sliding) for bridges, friction test data 223, 224, 233–237
Sodium hyposulphite as admixture in road soils 57
Sodium silicate, use in soil stabilization 57, 58
Softening points of bituminous materials:
specification requirements for distillation residues of road tars 89, 90, 95
test data for—
asphaltic cement used in stabilization of soil road 254
distillation residues of road tars 91–93, 96, 97, 99–101, 104–107, 109, 255
exposure residues of road tars 99–101, 104, 105
Soil constants, r. to p 64
Soil grains, grain size accumulation curves of sand admixtures for stabilized soil roads 51
Soil groups represented by:
excellent soil mortar for stabilized soil road 51
subgrades of experimental soil road in South Carolina 263, 270
Soil moisture, *see* Capillary moisture—Liquid limit(s) . . .—Moisture contents,• of soils—Moisture equivalents . . .—Plasticity . . .—Shrinkage . . .
Soil mortar, proportioning of soils in stabilization of soil roads 45, 47, 50–52, 56–64
Soil pores, size of, relation to capillary rise of soil moisture 46
Soil roads:
sandy-soil roads in South Carolina, experimental bituminous treatment, a 249–278
stabilization of 45–65, 249–278

Teller, L. W., joint author, a 143–171, 175–192
Temperature-ductility relations of distillation residues of road tars 97, 98
Temperature stresses in bridges, prevention by sliding bearings 223
Temperature, temperatures:
cutting points, intermediate, as affecting boiling points of distillates of road tars 95, 96, 108
distilling temperatures for road tars, relation to amounts of distillate of various tars 92, 93
effects upon—
hydration of soil colloids 48
moisture contents, densities, and stability of compacted soils 48–50, 63, 64
settlement of suspended soils, time required for 48
end temperatures for distillation of bituminous materials—
arbitrary end temperature in distillation of road tars as indicative of service behavior 95, 96, 98, 100, 101, 109
comparative data for end points of asphaltic materials and of road tars 95, 96, 109
heating temperatures used for—
materials used in road mixes tested on circular track 70
samples of bituminous mixtures in extraction tests 263
liquid temperatures of—
flux for coal-tar cutback for treatment of earth roads, specification requirement 89
tars, relation to vapor temperatures 95, 96, 109
temperatures used—
for oil-processed test mixtures when laid 70
for water baths used in stability tests of bituminous mixtures 39
in mixing and compression of test specimens of bituminous mixtures 39, 75, 106
in steam control of weeds 288
within exposure boxes during exposure tests of tars 98
testing temperatures used in tests (various) of bituminous materials 39, 63, 69, 70, 73, 74, 76, 77, 89–98, 106–109, 250, 254, 255, 262, 272, 274.
vapor temperatures, end points for distillation of tar products 95, 96, 109
Temperature variations:
as affecting movement of concrete slabs and action of joints 143, 152–155, 157–162, 180, 183, 185, 187, 188, 191
hourly changes in temperature and relative humidity during summer months (4 cities in United States) 294–296
Temperature-viscosity relations of road tars 94, 95
Temperature warping of concrete slabs, restraint to, relation to design of joints 148, 149, 152–154, 157–164, 185, 187, 191
Tensile stresses in concrete pavements as affected by joint designs 149, 153, 157, 159, 162, 163, 175–179, 181–183, 185–189, 191, 192.

Tension: Page
adhesion tension in asphalt pavements, r. to p. 65
surface tension in—
free water and in adsorbed films in soils 46
moist sand as cause of cohesion 130
taking of, by steel dowels, prevention as method of prevention of development of resisting moment in joints of concrete pavements 189, 191
test data for materials used in sliding bearings for bridges 224
vapor tension in moist sand as cause of cohesion 130
Tests, testing apparatus, *see* names of tests and names of materials tested.
Thermometers used in distillation tests of tars and liquid asphalts 95
Thickened end, thickened edge designs of concrete pavement slabs as affecting action of joints 145, 146, 149, 150, 154–159, 163–168, 170, 175, 178–183, 185–188, 192.
Through highways, *see* Trunk-line highways, . . .
Thrust in friction tests of sliding bearings for bridges, relation to bearing pressure 224–231
Tie bars, *see* Dowels . . .
Tires, vehicle:
steel tires, use and effects of 143, 145, 249, 256, 260, 261, 264, 266, 267
types used on—
circular test track apparatus 69–71
truck used in compaction of cement-treated soil road 60, 62
Titration method for determining absorption of fine aggregates 129
Tolls, road, in New Hampshire 27, 28
Topsoil:
topsoil roads in Georgia, r. to p. 65
treated topsoil, use as cover in stabilization of soil road 250, 252, 253, 259, 264–267
Tourist travel in:
Arkansas 113, 114, 125–127
Minnesota 15
New Hampshire 22, 28
Town roads and streets, township roads, administration and financing of, in—
Minnesota 1–17
New Hampshire 21–37, 40
New York 203–218
Towns, townships; taxes levied by, taxes payable in, motor vehicle ownership and travel in—
Minnesota 1–17
New Hampshire 21–37, 40
New York 203–218
Track, circular, for testing bituminous mixtures 69, 70
Tractors:
use in roadside weed control 284–286, 288
see also Trailers—Trucks, motor, and tractor trucks, . . .
Traffic:
action of—
as compaction method in construction of stabilized soil roads 60, 62–64, 256, 265–268
on low-cost bituminous mixtures, circular track tests 69–82
application apparatus used in laboratory tests of bituminous mixtures 69, 70
Arkansas traffic survey 113–127
see also Travel . . .
Trailers:
and motorcycles and tractors; registrations, fees paid for travel by, in—
Minnesota 9, 10
New York 212, 215, 216
and semitrailers—
capacity restrictions 137 (fn), 139 (fn)
highway use by, in Arkansas 115, 120, 121, 124–126
loads carried by, in Arkansas 120, 124–126
registrations and fees paid for, United States, 1935 137–139
Transportation of highway materials as element in construction costs 22, 83, 84
Transverse cracks in concrete pavements, control by joint designs 144, 186, 188, 192
Transverse joints in concrete pavements:
efficiency as compared with that of longitudinal joints 143, 152, 153, 159–163, 170, 171, 176–183, 185
spacing 144–147, 186–188
structural action 143–166, 169–171, 175–192
types used in early pavements 143, 144, 146, 147
Transverse tests of materials used in sliding bearings for bridges 224
Travel (motor vehicle) on highways:
in Arkansas 113–127
in South Carolina, data for stabilized soil road 249, 250, 256, 277
relation to population, highway taxes, and highway expenditures, 1932—
Minnesota 1, 5, 6, 9–11, 14–17
New Hampshire 22, 27–31, 33, 40
New York 203, 207, 215, 217, 218
vehicle mileages—
data from financial surveys 9–11, 14–16, 27–29, 33, 115, 119
definition of term 115

Truck-trailer combinations, Arkansas traffic survey data 115, 120, 121, 124–126
Trucks, motor:
and busses:
gasoline consumption—
in Minnesota 16
in New Hampshire 27–29
ownership, persons per vehicle, registrations, imposts paid for, highway use (1932)—
Minnesota 9, 10, 14–16
New Hampshire 27–30
New York 212, 214–216, 218
and tractor trucks, etc.—
highway use by, in Arkansas 113–115, 118–126
registrations and fees paid for, United States (1935) 137–139
capacities, Arkansas traffic survey data 115, 120, 122–124
contact with railroad service (Arkansas) 120
empty trucks and loaded trucks observed on Arkansas highways 114, 120–125
ownership—
Arkansas data 120, 122, 125, 126
see also Trucks, motor (and busses).
passengers carried by, Arkansas data 120–123, 125
use in roadside weed control 284–288, 293, 295, 297, 298
weights of loaded and of empty trucks on Arkansas highways 121–126

Minnesota (1932) 2, 3, 6, 8–11, 13–17
New Hampshire (1932) 21–31, 33, 34, 36, 37, 40
New York (1932) 204, 208, 211, 213–216, 218
United States, receipts from various State imposts on highway users—
1934 193–199
1935 238–245

V

Vapor temperatures of road tars and of liquid asphalts in distillation tests, relation to liquid temperatures 95, 96, 109
Vapor tension in moist sand as cause of cohesion 130
Vehicle mileages, *see* Travel (motor vehicle) on highways.
Vibratory compaction tests of dry aggregate used in bituminous mixtures tested on circular track 75, 76
Viscosimeters:
new viscosimeter 95
types used for road tars 93, 95, 109
Viscosity (ies):
of bituminous materials—
absolute viscosity (the poise) 95
data for—
liquid asphaltic materials 70, 93–95, 254, 274
materials used in stabilization of soil roads 63, 250, 253–257, 259, 267–269, 271–275, 278
oil for use as weed killer 298
tars, road 63, 89–95, 105–107, 109, 250, 253–257, 259, 267–269, 271–274

Viscosity (ies)—continued. Page
of bituminous materials—Continued.
limiting value for satisfactory road mixes 77
relation of viscosity of tars to weathering 105
relation to—
density produced in road mixes by various methods of compaction 75, 76
permissible bitumen content of road mixes 74, 76–78, 82
resistance of bituminous mixtures to effect of water 63, 77, 78, 82
stabilities of road surfaces 71–74, 76–79, 82, 106, 107, 109, 274
relations between viscosities of tars at various temperatures 93, 94
specification requirements for tars and liquid asphaltic materials 89, 90, 93, 95
test methods for tars and liquid asphaltic materials 91, 93–95, 109
of soils, soils in viscous state 46
of water in soils 46, 48, 50
Voids:
aggregate voids—
filling of, sealing of, in bulk specific gravity determinations of sand 128
in oil-processed road mixtures, relation to—
compaction method 75, 76
consistency of bituminous materials in mixtures 76
mixture voids and aggregate and bitumen volumes 74–76
relative volume of permeable voids in coarse and in fine sand, absorption test data 130, 131
in low-cost bituminous mixtures, circular track test data 69, 74–76, 79
Volatile matter, losses and effects of, data for:
materials and mixtures used in stabilized soil road 254, 271–273, 278
tar products 91–93, 95–109
Volume change, volumetric change, in soils; shrinkage and swelling 47–49, 52, 53, 56–58, 64, 263

W

Wabash soils 48, 53, 54
Warping of concrete pavements, warping stresses:
as affected by slab length 186–188
control by joint design 147–164, 175, 184–192
Water:
absorption by aggregates, cone method and other methods for determining absorption by sand 128–134
addition to soil mixtures in stabilization of soil roads 45, 59, 61–64
adsorbed water in—
fine aggregates 130
soils, adsorptive powers of soils 45–48, 50, 52–57, 64, 65
effect on—
oil-processed paving mixtures, relation to quality of mineral filler 82
rock powders 55
free water in—
concrete aggregates, in concrete mixes 128
soils 46, 50, 52

Water affinity:
of filler materials for stabilized soil roads 54
of soil colloids as influenced by adsorbed ions 53
Water bath, temperature used for stability test specimens of bituminous mixtures 39
Water-cement ratio of concrete as affected by adsorbed water in fine aggregates 130
Water content(s):
of aggregate at time of applying bitumen, effects upon oil-processed paving mixtures 78, 81, 82
of bituminous materials—
data for—
oil for use as weed killer 298
tars 89–92, 255
specification requirements for road tars 89, 90
of mud ejected through cracks in bituminous paving mixtures tested on circular track 80, 81
of oil-processed surfacing mixtures, effects 69, 77–82
Water-gas tars for road use 89–109
Water resistance of soil roads stabilized with asphaltic materials 62, 63
Wear:
of bearings (sliding) for bridges, friction test data for various metals 226–233, 237
of testing equipment for Hubbard-Field tests, reduction by design of testing molds and rings 38, 40
wear resistance of oil-processed paving mixtures, circular track test data 71, 74, 77, 82
wear-resisting surfaces (bituminous) for protection of stabilized soil roads 249–278

Weathering: Page
of liquid asphaltic materials, exposure tests 98, 108, 109
of soils 48, 51–53
of tar products—
accelerated weathering tests, exposure tests 91, 97–109
relation to viscosity 105
under service conditions 98, 105
Weed control and eradication on roadsides, a 281–300
Weight data for:
loads (gross, axle) of motor trucks on Arkansas highways 121–126
motor trucks and truck-trailer combinations on Arkansas highways 121–125
motor vehicles registered, 1935 137 (fn), 139 (fn)
neutralizers of soils, molecular weights as basis of calculation of amounts of neutralizers needed in stabilization of soils 54

Weight data for—Continued. Page
soils—
as basis of calculation of liquid limit and plastic limit 55
dry-weight, moisture-content curves for compacted soils, dry weight tests 48–51, 57, 63
molecular weights of clays, relation to adsorption 46
wet weight tests of soils 63
wheel and beam assembly in circular track test apparatus 69
Weight losses of tar products, exposure test data 99
Weight taxes on motor carriers, receipts from:
1934 193 (fn)
1935 243 (fn)
